

Front-end Assessment

Requirements:

1. You are required to build a web app using **GO REST Post Model** (<https://gorest.co.in/>).
2. The web app can do the CRUD functions on Post Model.
3. You are also required to handle the response callback if the response return errors or fail validation.
(It is not a front-end validation, you need to do AJAX handling response)
4. The web app needs to have filters and pagination when getting all posts.
5. The web app must be **responsive**.
6. Project progress can be tracked using any version-control system (e.g: Upload in GitHub)

[Additional mark will be given if using any front-end framework: e.g. *React* or *Vue.js* or any framework that you are comfortable with]
